## RESEARCH

---

My research combines modern concepts in Computer Graphics, Computer Vision, Machine Learning and Human Computer Interaction, with broad applications in 2D and 3D digital contents analysis and synthesis. In particular, I am interested in *interactive* modeling and *automatic* reconstruction of high-fidelity 3D hair, face, and body models.

## MORE RESEARCH EXPERIENCE

### Strip-based Hair Modeling in VR

2017.08—present

We provide a 3D VR authoring interface for immersive interaction with the hair models. Our system combines the flexibility of manual authoring, the convenience of data-driven automation and the power of machine learning for high quality hair modeling.

### Synthesizing Dynamic Facial Textures from a Single Image

2018.01—present

We propose a conditional generative adversarial network that learns a mapping from a photograph of the subject in neutral pose to an arbitrary FACS-controlled expression.

### Autocomplete VR painting

2016.07—present

The goal is to handle different types of repetitions in VR painting, including the detail decorative strokes, the surface strokes, and even higher-level scaffold, in a simple and general framework.

### Interactive Facial Hair Editing and Synthesis

2017.06—present

Users can design facial hairs of different shapes/lengths/densities via simple sketching, while keeping the style of a target facial hair defined by an exemplar image.
