RESEARCH

My research combines modern concepts in computer graphics, computer vision, machine learning and human computer interaction, with broad applications in 2D/3D/VR contents authoring, analysis, and synthesis. I am interested in designing interactive/predictive systems and deep learning-based algorithms to free the artists from the tedious works so they can focus on creation.

MORE RESEARCH EXPERIENCE

Strip-based Hair Modeling in VR

2017.08 — ongoing

We provide a 3D VR authoring interface for immersive interaction with the hair models. Our system combines the flexibility of manual authoring, the convenience of data-driven automation for high quality hair modeling.

Interactive Facial Hair Editing and Synthesis

2017.06 — ongoing

Users can design facial hairs of different shapes/lengths/densities via simple sketching, while keeping the style of a target facial hair defined by an exemplar image.

Perspective Undistortion of Unconstrained Portrait Photos

2018.03 — ongoing

We present a deep learning-based approach specially tailored for rectifying the facial distortion in an unconstrained portrait image.

Portrait Normalization

2018.12 — ongoing

We present a deep learning-based approach to normalize the lighting, perspective distortion, expression and pose of a portrait photo.
